

# The world's first AI-Powered Intelligent Workflow Assistant

The screenshot displays the Fusionate AI interface with a dark theme. On the left, a sidebar shows the user profile 'Ace Apolonio' and a list of available AI tools: Email Manager, Customer Support, Travel Planner, Meeting Summarizer, Data Analyst, Ads Manager, Resume Screener, Onboarder, and File Organizer. The main workspace shows a chat conversation where the user requests a super app for automating their design inspiration process. The AI assistant recommends a workflow involving Ace, a Creative Designer, Midjourney, Figma, and Slack. A visual diagram illustrates this workflow: Ace inputs a design request, the Creative Designer finds trends and prepares a prompt, Midjourney generates AI design inspirations, Figma builds a mood board, and Slack sends the URL to a designated channel. The chat concludes with the AI confirming the 'Design Inspirer' app has been built. At the bottom, a card for 'Design Inspirer' shows it consists of 5 fusions. On the right, there is a file upload section and a 'Teams' section listing 'Development' and 'Marketing' teams.

**Workflow Diagram:**

```
graph LR; Ace[Ace] -- "Inputs design request" --> CD[Creative Designer]; CD -- "Finds latest design trends on the internet and prepares a prompt." --> MJ[Midjourney]; MJ -- "Generates AI design inspirations, images, colors, patterns, etc. based on the Creative Designer's prompt." --> F[Figma]; F -- "Builds a mood board containing all design inspirations and elements and outputs URL for access" --> S[Slack]; S -- "URL is sent to your designated Slack channel or inbox" --> End[ ];
```

**Design Inspirer**  
5 fusions

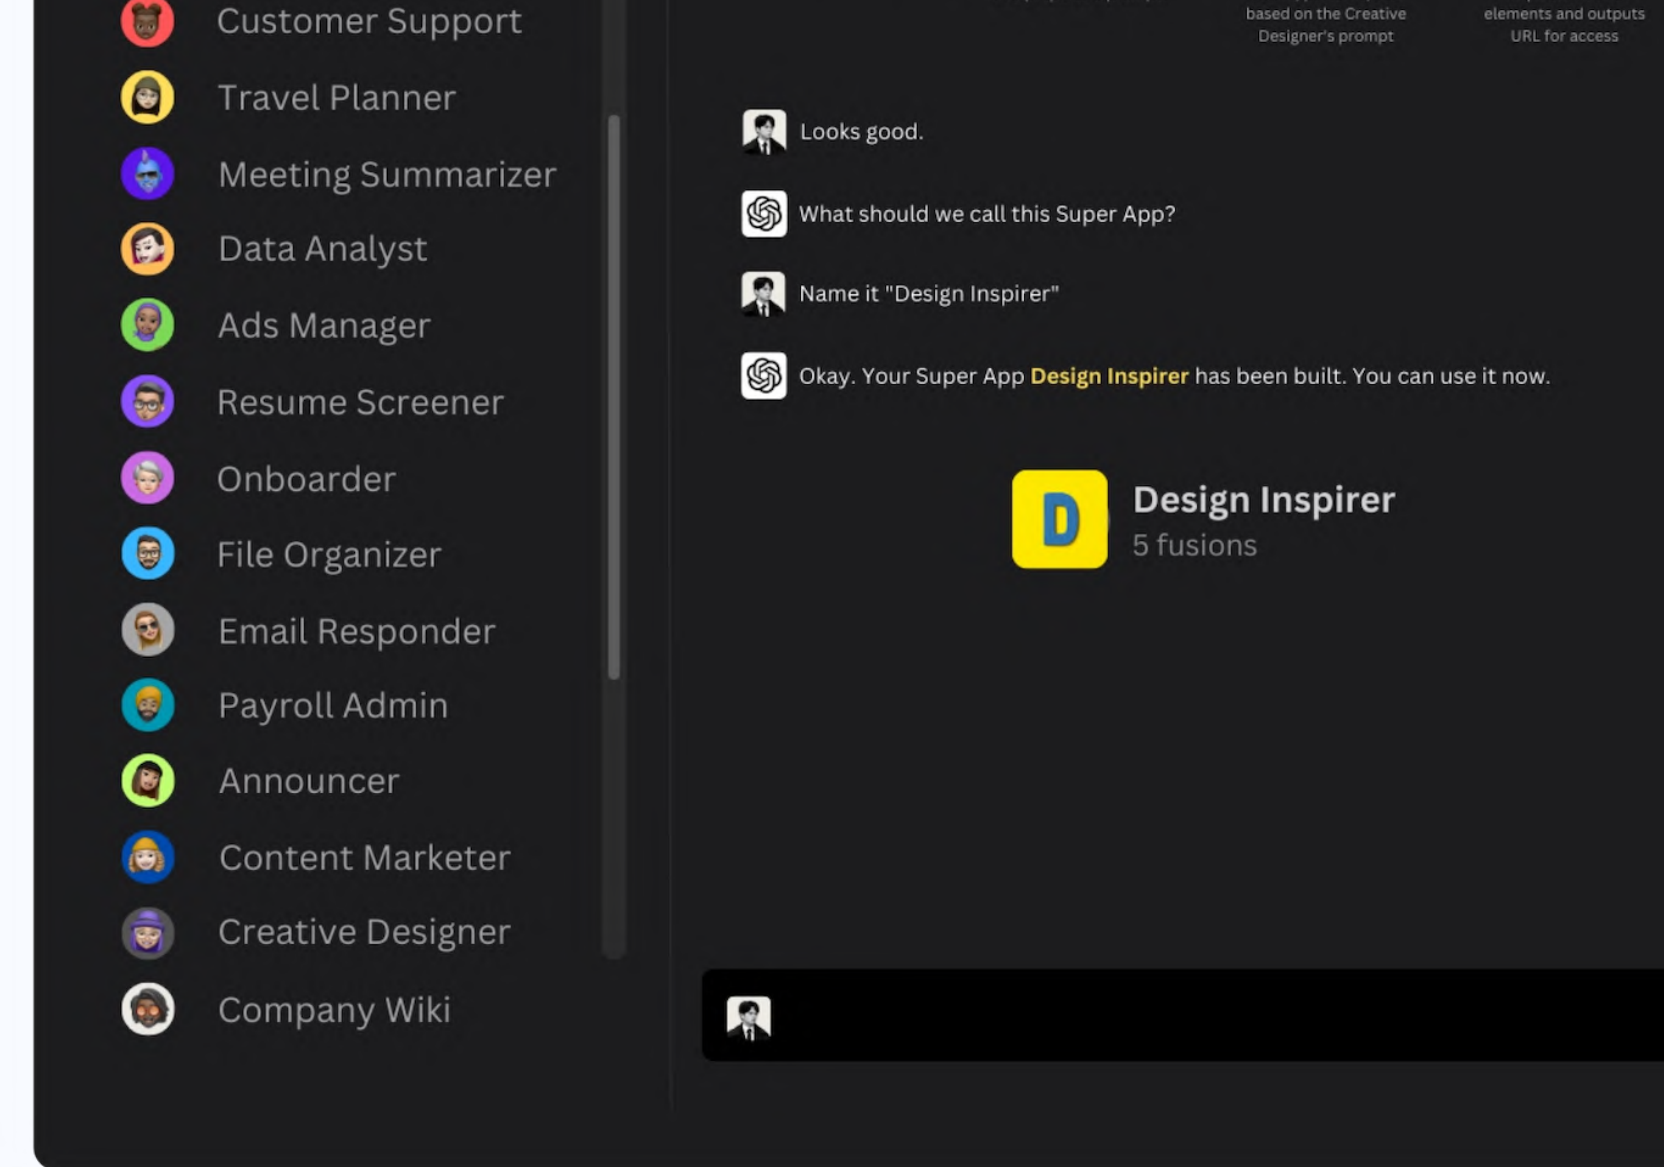

# The problem —

**98% of the workforce say they are interrupted at least 3 or 4 times a day.**

The most common distractions include email, co-workers, the internet, phone calls/texts, inefficient workflows, workspace disorganization, unproductive meetings, and multitasking.

Companies **lose** out on substantial **profit** and **720 hours** a year per person working.

Employees still use apps, software, and AI tools separately on different interfaces, resulting in **interrupted workflow, decreased productivity, and a lack of seamless integration and collaboration.**

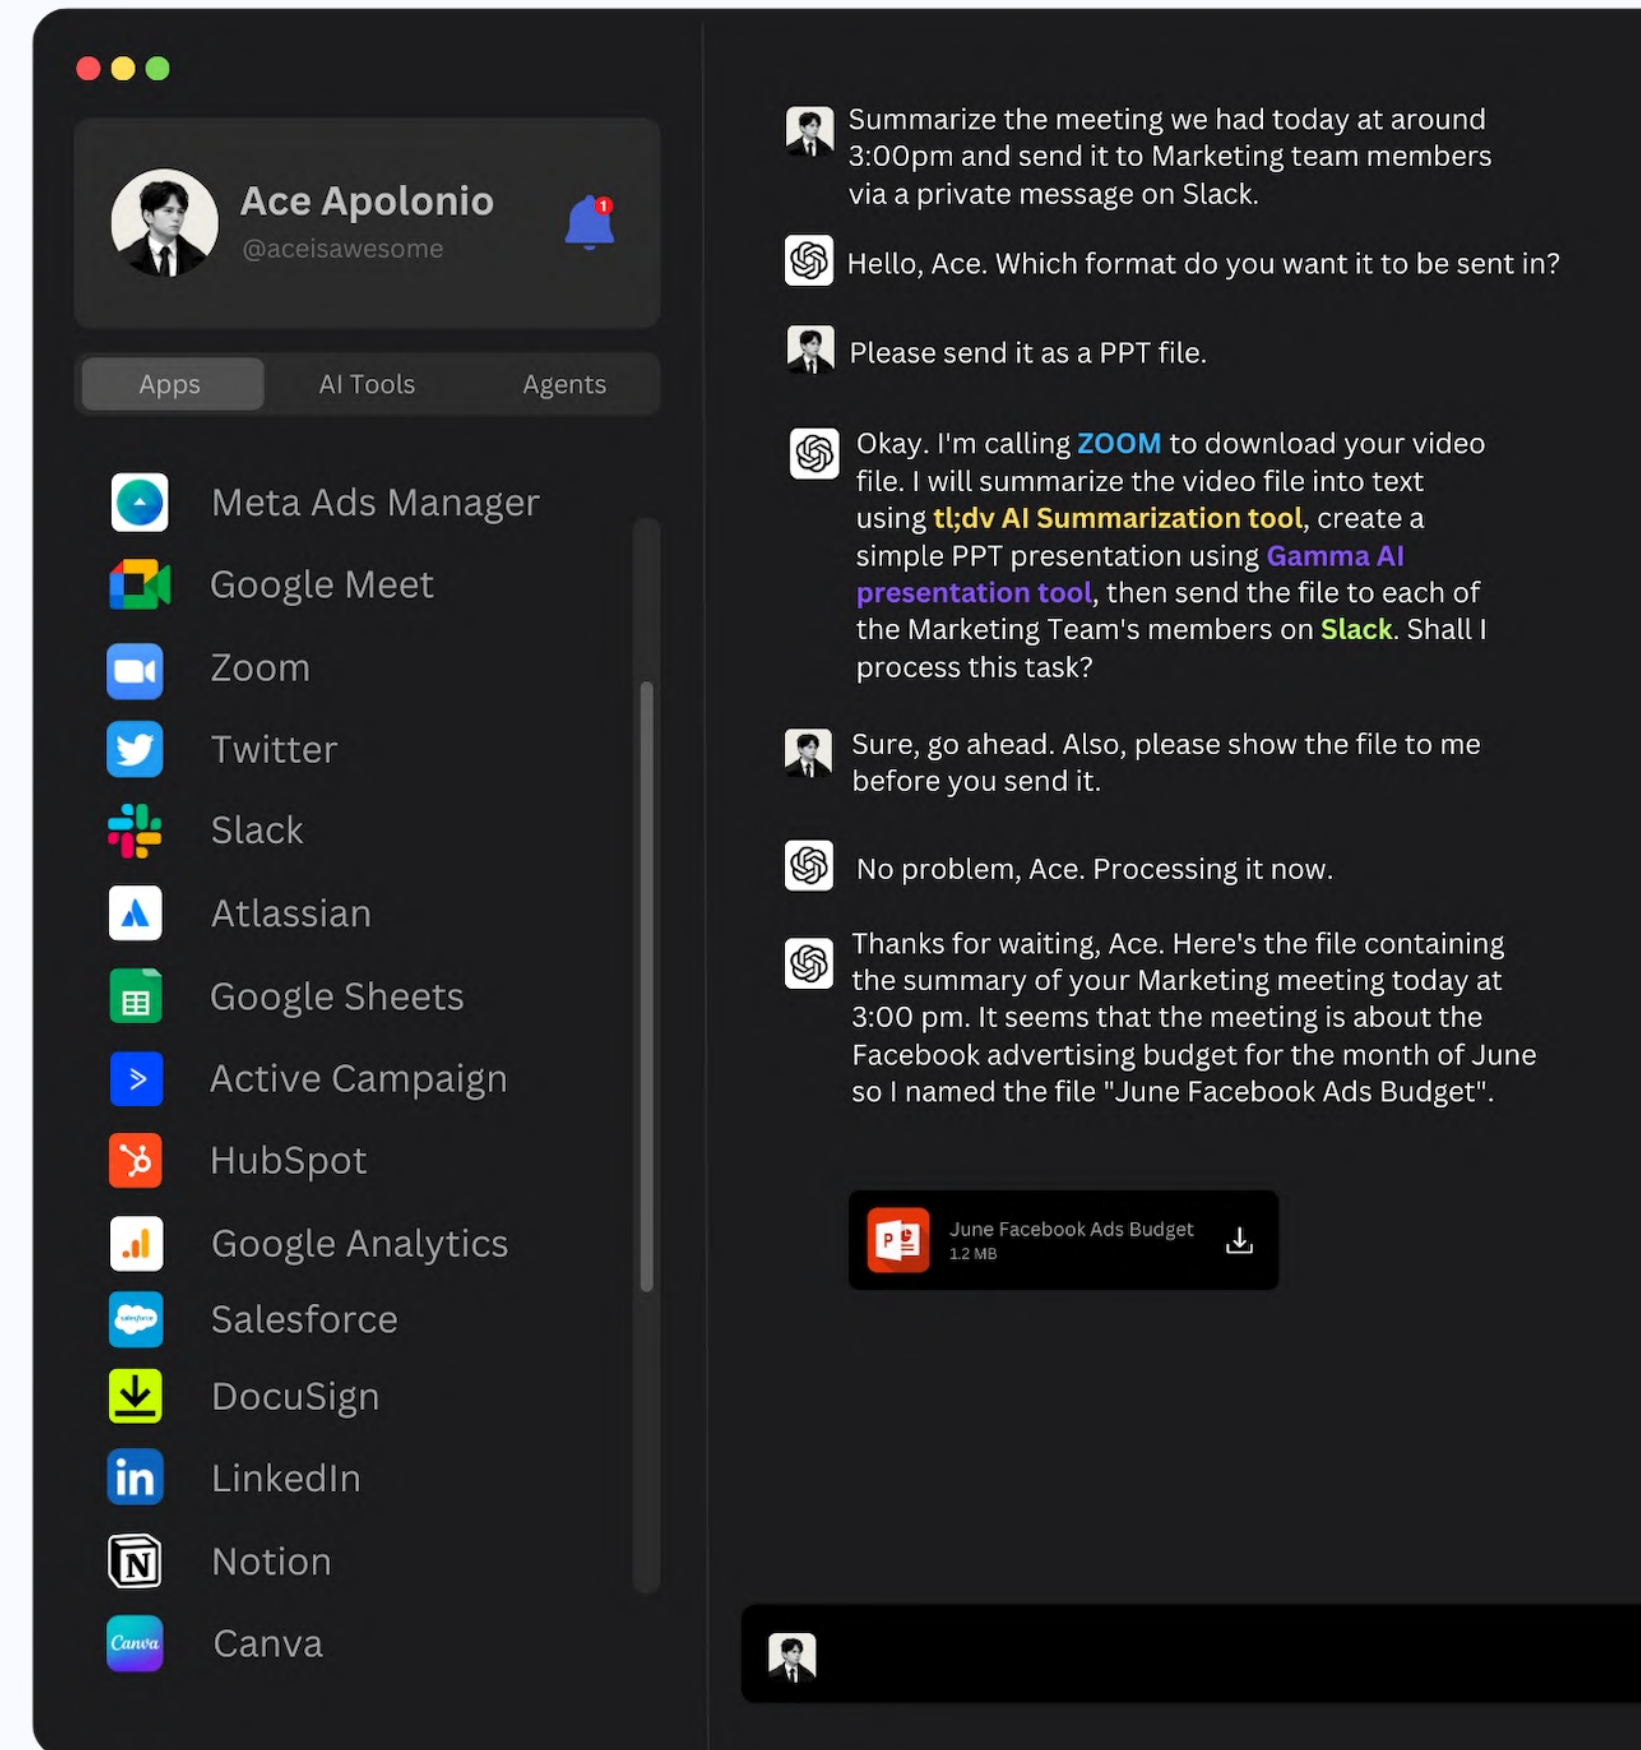

## Our mission —

We imagine the *future* of work to be when every office employee has a **personal AI assistant** to help with tasks that can be automated and delegated.

# The solution —

The advancements in AI call for another form of productivity tool in the workplace: an **intelligent workflow assistant** that is always available to assist employees with work tasks and automations removing interruptions and streamlining workflows even further.

# The product —

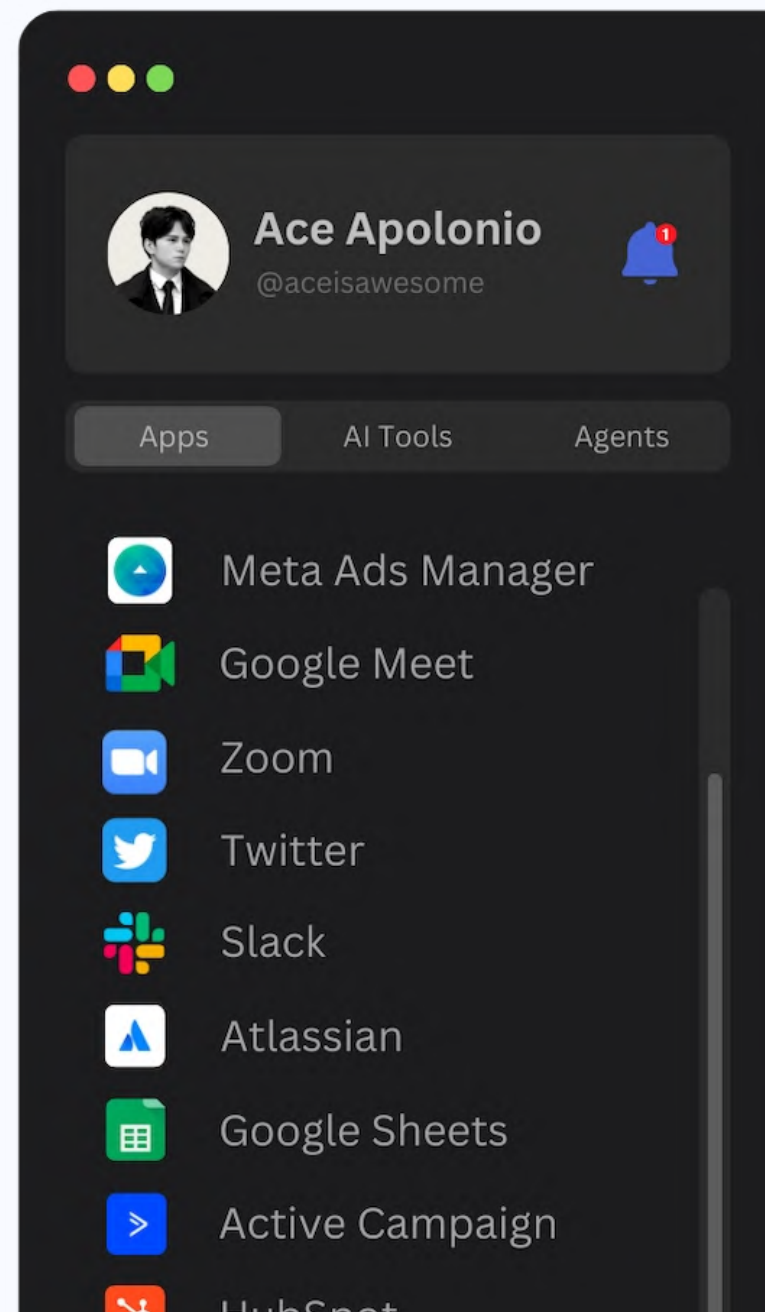

A **unified interface** where most work can be done without distraction and interruptions. All you need to do is talk to the AI to accomplish tasks.

# All your work productivity tools in **one place.**

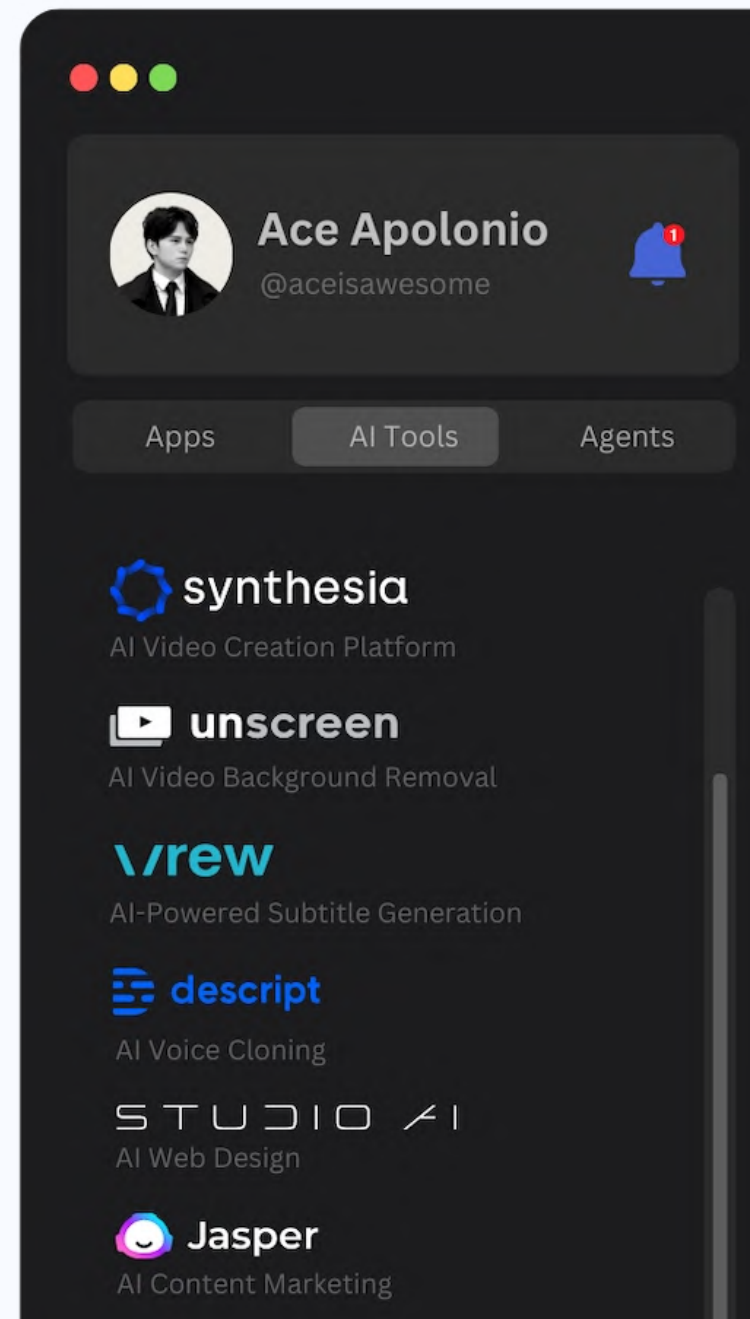

Regular productivity  
softwares

## Apps

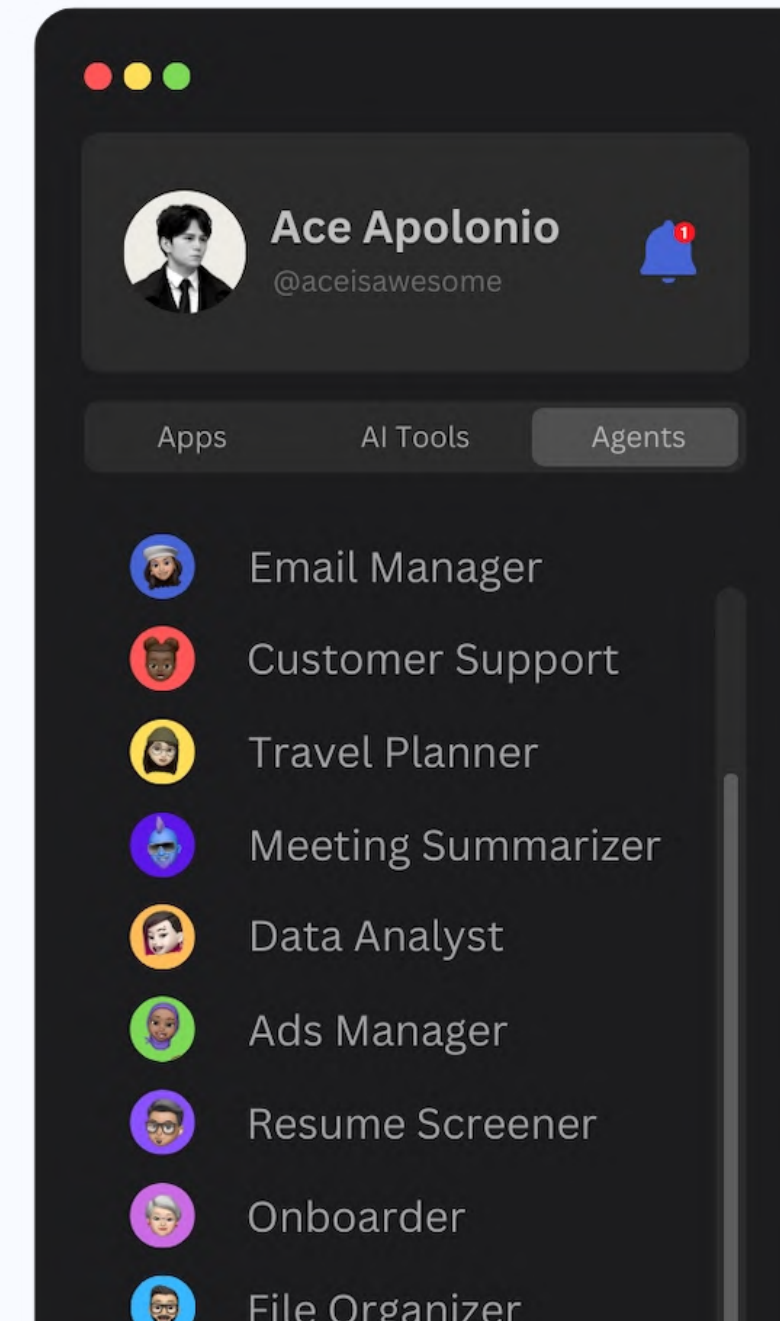

Webapps powered  
by ML models

## AI Tools

Pre-trained submodels for  
specific tasks

## AI Agents

But what makes Fusionate powerful is our **proprietary technology** that connects user input, Apps, AI tools, and AI agents to perform complicated tasks with a few prompts. And we call this

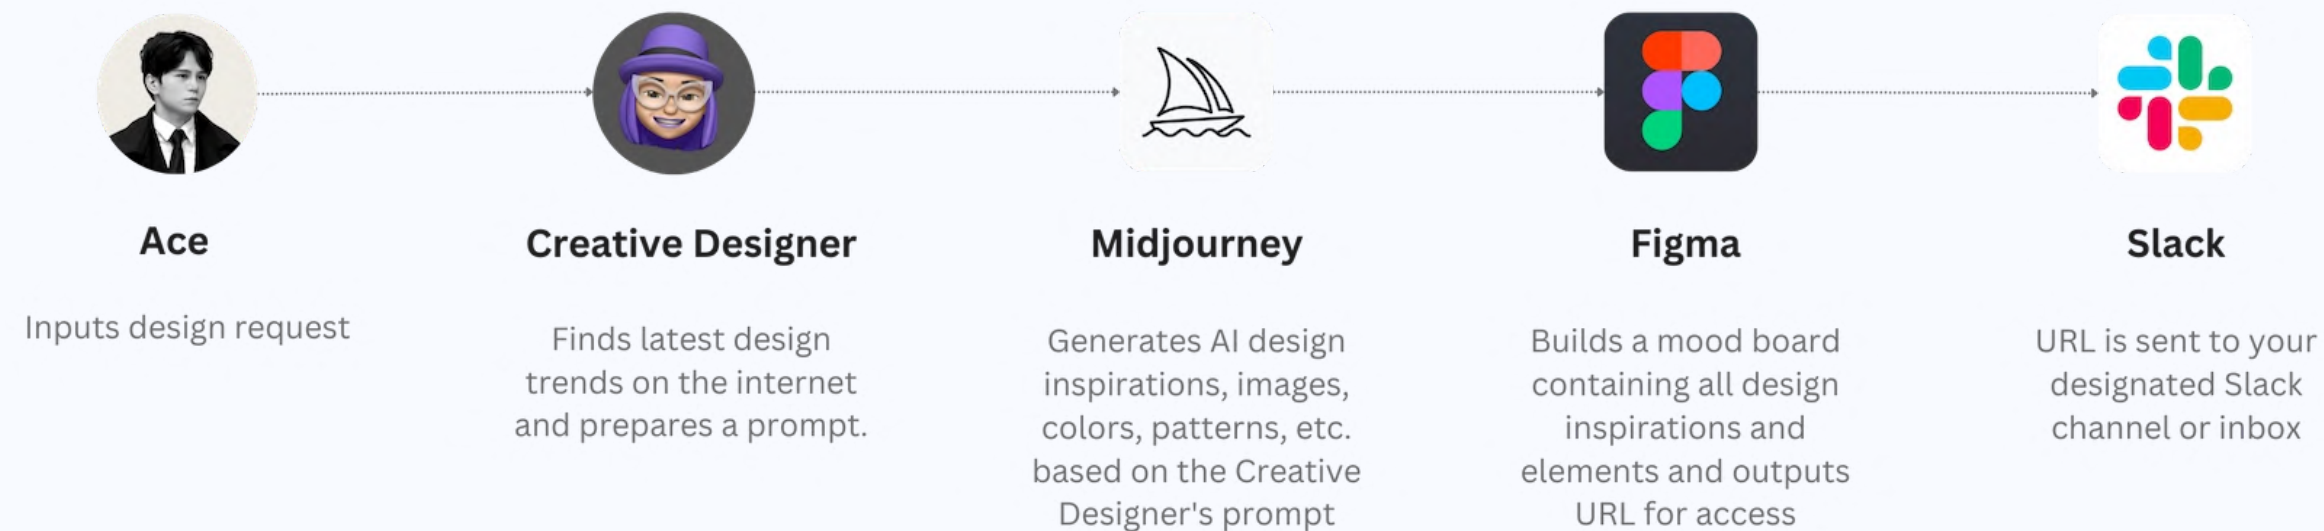

# Super Apps

Build a super app for automating my design inspiration process.

Okay. I recommend this setup:

# Use Cases

Discover several creative ways to leverage Fusionate AI at your professional environment. We have more in store!

## Sales

Data-driven Insights

Lead scoring and prioritization, personalized recommendations for customers, sales forecasting, performance analysis, automated data entry, CRM management, intelligent sales process optimization and much more.

## Marketing

Targeted Marketing Intelligence

## Development

Smart Development Copilot

## Human Resources

Enhanced Talent Management

Hi, @Fusionate. I need help with lead scoring for the leads we received through email in the 1st quarter. I approve access to our Gmail account.

Hi, Ace. I looked through **548 emails** and found **292 candidates**. Based on their engagement level, it appears that these leads have shown different levels of interest. I'm creating an Excel file to show you my lead scoring process.

Okay, sure. Take your time.

Thanks for waiting, here it is:

1st Quarter Lead Score  
2.3 MB

Enhanced Talent Management

Code automation and optimization, bug detection and resolution, intelligent code suggestions and completion, version control and collaboration, automated testing and deployment, code security analysis, and much more

Hi, @Fusionate. Make a pull request from the company repo named (FuseFrontEnd) to check for any updates and fix any errors.

Okay, Ace. I have done a git pull from the company repo and have fixed the necessary error. Are you ready to merge now?

I want you to add this new feature: Log in using OAuth, and alert me when you are done.

Sure. OAuth login using Google has been added. Would you like to check VSCode?

```
import {OAuth2Client} from 'google-auth-library';

const client = new OAuth2Client(process.env.GOOGLE_CLIENT_ID);

export default async (req, res) => {
  const { idToken } = req.body;

  try {
    const ticket = await client.verifyIdToken({
      idToken,
      audience: process.env.GOOGLE_CLIENT_ID,
    });
  }
}
```
